Landscape Department

IN connection with our Nursery business we maintain a highly specialized Landscape Department, and are well equipped to take up landscape problems from every angle.

Parks, cemeteries, real estate sub-divisions, playgrounds, large estates, as well as the small grounds surrounding the more modest home, all have their special conditions and requirements which can only be successfully co-ordinated by one well trained in the principles of landscape design and possessing a knowledge of plant material.

In order that any landscape development may be successfully as well as economically carried out, it is highly desirable for those contemplating such work to seek the advice of a landscape gardener even before any general layout is considered. In this way every natural advantage may be made use of and often serious errors involving both loss of time and expense be avoided.

A thorough knowledge of soil requirement, exposure, drainage and grading problems as well as that of plant material is often as essential as that of landscape design and the very complexity of these conditions renders it impossible for one not familiar with landscape principles to economically or artistically arrange your home grounds for you.

Our landscape department is proving of especial advantage to those who possess old established grounds, where often an abundance of matured plant material exists, but which is not arranged to best advantage. We often find it necessary to re-design the layout of the walks and drives to meet more modern needs and by the use of the plant material on hand, with such additions as are necessary, excellent results can often be obtained at minimum expense.

We are always glad to offer suggestions free of charge to those who have new grounds to lay out or old grounds to rearrange, but where special visits are made and planting plans, specifications, etc., are desired, a reasonable charge is made to cover services rendered.

Important to Purchasers

PACKING. Prices in this catalog are for nursery stock at the Nursery carefully dug and roots suitably protected. Many purchasers are finding it both an economy and convenience to call at the Nursery for their stock. On freight or express shipments when stock is purchased at 100 or 1,000 rates or in case of large bulky stock requiring special baling or boxing for safe transportation, a charge will be made sufficient to cover the cost of packing. No charge is made for packing on shipments of small and medium sizes when purchased at single or ten rate prices. Small sizes of general nursery stock, roses, herbaceous plants, etc., can oftentimes be sent by parcel post. In such cases we will prepay and bill postage to purchaser.

SHIPPING. We make no charge for delivery to local freight and express companies from which point our responsibility for safe delivery ceases and complaint, if any, should be made direct to the transportation company. We make no charge for delivery of purchases in the city of New Haven.

Auto delivery is advised where order amounts to truck-load quantities for Connecticut and nearby points in Massachusetts, Rhode Island and New York. Charges for which depend upon size of load and distance to destination. A number of less than truck-load orders can often be grouped together along the same route and delivered at a single auto run. In this case delivery charges will be equitably divided. There are no *packing charges* on stock delivered by auto.

TERMS. Orders from parties unknown to us should be accompanied by remittance or satisfactory references. All accounts are due when bills are presented, and prompt payment is expected. Customers remitting within ten days from date of invoice may deduct 2% discount.

Single-rate prices are for less than five of a kind.

Ten-rate prices are for five or more, and less than twenty-five of a kind.

Hundred-rate prices are for twenty-five or more, and less than 250 of a kind.

Thousand-rate prices are for 250 or more of a kind.

Trees and Plants individually selected at our nurseries, will be charged for according to quoted price at time of selection.

Prices in this Catalog supersede previous catalog quotations and are subject to change without notice, owing to conditions not within our control.

WHILE we exercise the greatest care to have all the Trees, Shrubs, and Plants, etc., genuine and believe them to be true to label and hold ourselves prepared to refund the purchase price or replace on proper proof all that prove untrue, we do not give any warranty, express or implied: and in case of any error on our part, it is mutually agreed between the purchaser and ourselves that we shall not at any time be held responsible for a greater amount than the original price of the goods.

PLEASE READ THIS. The nature of the nursery business is such that we cannot assemble and prepare an order for a purchaser without having been given a reasonable amount of time. This is especially true in the spring and fall as these are the busiest times in our packing department. On large orders please give us as much leeway as possible before shipping date. On small orders we cannot agree to have them ready to be called for without less than twenty-four hours notice.

Visitors are always most cordially welcome. During the spring and fall there are short intervals, however, when it is quite impossible for us to devote much time to showing parties about the nursery, as these are the most strenuous shipping periods of the entire year. No business transacted on Sunday.

HOW TO REACH US. Our nurseries and office are located at EDGEWOOD, Edgewood Avenue, near the New Yale Bowl, just beyond Edgewood Park. Auto via Edgewood Avenue or West Chapel Street. Edgewood Trolley cars direct to Nurseries.

Deciduous Trees

AMONG the large number of trees we are growing we always have on hand some which are not perfect specimens. The trunks may be crooked or the heads uneven. These trees are just as thrifty and vigorous as the perfect specimens, and are well suited for grouping and mass planting effects. To those who prefer such trees, we shall be glad to submit special prices.

The grounds about ones' place need not be a burden. By the planting of permanent Trees and Shrubs for beauty, and Fruit-trees, Grape-vines, Berry-plants, etc. in the garden for both beauty and utility, one can so arrange their grounds as to require a minimum amount of upkeep and enjoy a maximum of return of both beauty and utility. This is certainly true economy, a feature which we are all considering especially at the present time.

It is a pleasant awakening to the beginner when a wealth of beauty results from well arranged plantings of Trees, Shrubs, Evergreens, Vines, Roses, Herbaceous-plants, etc. and when an abundant supply of delicious Fruits, Berries, etc. are produced in the garden, even within the average restricted suburban home ground area, and all this with so small amount of care from year to year. **ARRANGE AND PLANT YOUR GROUNDS IN THE PERMANENT WAY.**

Evergreens.

WE ALWAYS have in our blocks of evergreens, some plants which are not strictly specimens. These may be thin on one side or raised a little high from the ground. These plants are healthy, well rooted, and will work in economically for mass plantings and windbreak effects. We shall be pleased to quote special prices to those who are interested in evergreens of this kind.

Evergreens lend a charm to the general landscape. Evergreens are also of great value in the working out of gardening plans and are often freely used where the most pleasing and satisfactory landscape results are obtained. Evergreens well arranged are especially acceptable during the winter season when they present an agreeable contrast with the more sombre colorings of their surroundings.

BOX-BARBERRY

Sept. 9, 1919.

Bldgs. & Grounds Pan-American Union,
Washington, D. C.

"I am pleased to report to you that the Box-Barberry which you sent us has given good results and will, I am sure, give us a short bushy hedge of good prim appearance. May I again express my appreciation for the excellent material shipped us and the prompt delivery which you made."

J. Walton Barrett, Supt.

Sept. 15, 1919.

Newton, Mass.

"I bought Box-Barberry to replace a Boxwood Hedge that was winter killed. The Box-Barberry is making a fine growth."

Mrs. Elizabeth W. Mack.

Garden bordered with Box-Barberry four years planted. Two-year-old stock was used.
Planted six inches apart in single row.

Box-Barberry

Dwarf type of
Berberis Thunbergii

THE NEW HARDY EDGING AND DWARF HEDGE.

A Distinct Novelty; Originated at Our Nurseries.

BOX-BARBERRY is a dwarf, upright form of the popular *Berberis Thunbergii* or Japan Barberry; it is perfectly hardy, thriving wherever *Berberis Thunbergii* grows. It does not carry wheat-rust.

BOX-BARBERRY lends itself most happily to low edgings for formal gardens, when set from four to six inches apart and kept trimmed. It also makes a beautiful low hedge when set six to twelve inches apart. The foliage is a pleasing light green, changing in autumn to rich reds and yellows. Box-Barberry a splendid informal foreground shrub or can be trimmed into formal shapes.

2 year, field-grown, \$0.50 each; \$4.00 per 10; \$30.00 per 100; \$250.00 per 1000
3 year, field-grown, .75 each; 5.00 per 10; 40.00 per 100; 350.00 per 1000
(50 at 100 rates; 250 at 1000 rates)

Specimens 4 years, \$1.00 each, \$9.00 per 10.

Available Stock Limited. Orders filled Strictly in Rotation.

July 17, 1919.

Yonkers, N. Y.

"The Box-Barberry border in the Greek-Garden is very satisfactory."

A. Millard, Supt.

NOTE:—This was planted in Fall of 1918 and was one of the first plantings requiring several thousand Box-Barberry plants.

Missouri Botanical Garden Bulletin.
Dec. 1919—No. 10.

"A recent introduction which promises to become a fine substitute for the Box-wood is the BOX-BARBERRY."

Wherever we find trees, shrubs, flowers, and lawns, well arranged and neatly kept up, be it in park, estate, or less pretentious home grounds, we see reflected a spirit of refinement which makes for good citizenship.

Herbaceous Perennials

NO group of garden flowers is dearer to the hearts of the people than what is usually classified as Hardy Herbaceous Perennials, including practically all of the interesting so-called old-fashioned garden flowers. Pæonies, Iris, Phlox, Poppies, Larkspurs, Foxgloves, etc., come under this classification.

Prices, unless otherwise noted:

Strong, field-grown, 25c. each, \$2.00 per ten, \$15.00 per hundred.

Smaller sizes, mostly field-grown, 20c. each, \$1.50 per ten, \$12.00 per hundred.

Clumps of some kinds, 50c. to \$1.00 each.

ÆGOPodium PODAGRARIA VAR. VARIEGATA. One foot. Splendid for covering the ground under trees. Will grow almost anywhere.

ALYSSUM SAXATILE (Golden tuft). $\frac{1}{2}$ to 1 foot. May and June.

Forms a clump of velvety foliage, flowers of the richest yellow, fragrant.

ANTHEMIS TINCTORIA. 2 to 3 feet. July to October.

Brilliant yellow daisies in great masses, splendid for cutting.

ARTEMISIA LACTIFLORA. 4 feet. July to October.

A charming plant bearing spikes of white flowers, beautiful dark green foliage.

ASTER NOVÆ-ANGLIÆ VAR. ROSEA. 2 to 5 feet. October to November.

Hardy Roses

CHOICE HARDY GARDEN ROSES are a special feature of our business, many thousands of them being sold annually. Most experienced buyers of roses prefer *strong, field-grown stock*, all ready to make a good showing of both vigorous growth and blossoms. This is the only grade we offer.

Distance Apart to Plant. Rose gardens are usually most effective when planted in beds or borders wide enough to allow for at least three rows of plants. This is, of course, subject to local conditions. If planted in beds seven feet wide this allows for three rows set $2\frac{1}{2}$ feet apart and a margin of a foot for outside borders. A rose bed ten feet long and seven feet wide will call for one dozen roses if planted $2\frac{1}{2}$ feet apart each way. A rose bed twenty-five feet long requires thirty plants. It is desirable to place the strongest growing varieties in the center row. If the border is in the foreground of a fence, wall or other dividing line, the strongest growing roses should be planted in the back row, also climbing roses should be planted in the background about six feet apart, and trained over some support. This will add to the effect and the climbing roses will not interfere with the others. It is desirable, when a number of roses are used, to plant enough of each kind in a group to produce a solid effect of color.

If desiring advice on Rose-Gardens, we will be glad to have you inquire of us for general information. We are sure we can assist you.

Hybrid Tea and other Perpetual Blooming Roses

These roses are the product of crossing the hybrid-perpetual-roses with the tender tea-roses. They are, as a class, not so strong growers as the hybrid-perpetuals, and not quite so hardy to extremes of winter, but will repay any extra care they may demand for protection. The flowers have all the refinement of the tea-roses in color, texture and fragrance, and bloom quite freely during the summer. There is now no excuse for not having in the Northern gardens a profusion of beautiful roses during the entire summer, and as fine ones as anywhere in the world.

Hybrid Perpetual Roses

This splendid class of vigorous, hardy roses is the result of crossing the favorite old garden roses with the less vigorous and less hardy tea roses. This crossing has resulted in producing a race of roses which not only bloom freely at the usual rose season, but at intervals during the summer and fall. Such favorites as the General Jacqueminot etc., belong to this class. If restricted to a few *garden-roses*, one can safely select them from among the Hybrid-Perpetual class.

VARIETIES.

- Alfred Colomb.** Brilliant crimson. Very large full form. Extremely fragrant.
- Anne De Diesbach.** (Syn. Glory of France). Carmine, a beautiful shade; very large. A superior variety.

Rambler Roses and other Hardy Climbing Roses

With the advent of the Ramblers, we have a class of roses of such vigorous growth that almost any garden structure can be completely festooned with an effective growth of vine, glossy foliage and an abundance of bloom rivaling the famed California gardens. To get best results with the Rambler Roses, it is necessary that they be well fertilized, as these roses are hearty feeders. This can be done to best advantage at the time the ground is being prepared for planting.

VARIETIES.

- American Pillar.** Vigorous grower. Single, clear pink.
- Baltimore Belle.** Pale blush, becoming nearly white; compact and fine.
- Christine Wright.** A bright wild-rose-pink. Blooms produced singly and in clusters. Vigorous grower.

PRICES of the above Roses, Strong, 2 years old, field grown, \$1.00 each, \$9.00 per 10.

Fruit Department.

FRUIT growing on a large scale is one of the country's profitable industries. The fortunate few who have large orchards of bearing apples and other fruit trees, which have been properly cared for, are now reaping rich rewards. No part of the United States offers better opportunities than New England for the producing of highly flavored and richly colored fruit. In a lesser way, the home acre and the smaller city garden, offer opportunities for the producing of an abundant crop of fruit which should not be neglected. Aside from the utility feature, there is the genuine pleasure, delight and healthful recreation which is a reward for those who set out and care for a few trees, vines, and berry plants.

Transplanting Directions

Preparing the Soil

No one thing is of more importance to the ultimate development of plants than thorough preparation of the soil. When the natural soil is of a poor quality, replace to a depth of about two feet with a good grade of loam. For a single plant, dig out a hole twice as large as is really necessary to contain its roots. When group plantings are to be made, dig out the whole area. Well rotted manure may be mixed into the soil to good advantage, but always avoid the use of fresh manure in contact with roots of a plant.

Planting

At the time of planting, most plants need a little shaping, both of tops and roots. Since a portion of the root system has been cut away in digging, a corresponding portion of the top should be removed. It is best to retain the general shape of the plant, cutting away any weak or injured branches, and about one third of the previous year's growth from the end of each branch. Evergreens with a ball of earth are exceptions.

Be careful not to set the plant too deeply. Place the plant a little deeper than the point at which it is to remain, and carefully spread out all the roots (plants dug with a ball of earth excepted), now shovel in the earth until the roots are covered about two inches. Lift the plant up and down until the soil settles in well and no cavities remain. Throw in more earth and with a blunt stick work well in under the roots; beginning at the center of the plant and working out. When the hole is filled to within three or four inches of the top, pour in two or three pailfuls of water. Allow this to disappear, and then fill the hole, leaving a slight depression around the plant.

In planting evergreens or other plants dug with a ball of earth, care should be taken to prevent breaking the ball. Place the plant in the hole so that the top of the ball is not more than one inch below the level of the ground. Put in enough soil to hold the plant firmly in place. Do not remove the burlap covering from around the ball, but rip it at the top and down the sides in about three places and crowd to the sides of the hole. Fill up as described above.

Watering and Mulching

After a plant has been set in the ground it should be mulched with manure, leaves or lawn clippings to prevent evaporation of the soil's moisture. When mulching is unsightly or not practical, occasional thorough watering and frequent loosening of the soil serves a similar purpose. The ground around new made plantings should never be allowed to become dry.

After Care

Many plantings never receive the after care they require. This applies more especially to house foundation and other intensive plantings of both evergreens and shrubs. Such plantings are often massed with the plants placed close to one another to produce immediate effects. Unless these plantings are trimmed each season, they soon lose their original attractiveness; whereas if they are given proper care, they improve in appearance.

Deciduous shrubs should be pruned so as to remove a portion of the old wood each year, saving the new growth. By this method each plant is entirely renewed every few years. Judgment must be used in pruning so that as much of the blossoming wood as possible will remain. This refers especially to Spiræas, Forsythias, Japan Quinces, etc. Such shrubs as Hydrangeas, Altheas and most roses, bloom on the new growth and are improved by pruning before the spring growth begins.

Massed plantings of evergreens need careful pruning and shaping each season, otherwise the stronger growers will over crowd the others. This trimming can be done to advantage just before the new growth starts in the spring.

These brief instructions are only intended to give a few simple pointers. Write to us freely if you have any garden problems which are causing you anxiety.

Protection

It is advisable to stake a newly planted tree in locations where the wind blows severely. The continued shaking of the tree prevents the little rootlets from getting a hold in the soil and often results in failure of a plant to grow.

Suitable guards should be provided for all trees planted where exposed to horse bites, hub scars and smiliar injuries.

Foliage

Specimen as a Lawn Tree

**GINKO or Salisburia,
Maiden-hair Tree**

Popularly so named owing to the resemblance of its foliage to the Maiden Hair Fern. A tree from China and Japan of great beauty and hardiness. Very sturdy and thrives practically everywhere. Lives to great age and is noted for its freedom from insects.

Ideal as a specimen lawn tree or as an avenue tree. See Catalogue for Prices
